

Increase Savings and Comfort by Sealing Your Building Envelope

Heating and cooling a vast community center, arena or pool area is no small feat. That's why it's critically important that gaps, cracks and holes in your building envelope are properly sealed. The consequences of air leakage left unchecked can be significant, including greater (and more costly) energy consumption, poor indoor air quality, occupant discomfort, and a markedly decreased building life cycle due to the infiltration of unconditioned, moisture-laden air, insects and dust.

Canam Building Envelope Specialists provides **building envelope solutions** and **air barrier systems** to eliminate air leakage, improve energy efficiency and reduce costs. With more than 25 years of experience in providing air barrier audits, retrofit installations and testing, Canam is well-versed in issues unique to arena building envelopes, including solutions for hockey rinks experiencing the condensation and icing of brine headers. When evaluating if a roof is restorable, only Tremco Roofing and our Canam affiliate can also assess and repair leaks in the building envelope within the scope of work of your restoration project.

BEFORE Uninsulated brine headers are causing frosting and unsafe conditions as well as not being energy efficient.

AFTER Insulated headers will eliminate condensation and frost, ensuring the mechanical system runs efficiently.

Score a "Hat Trick" with Tremco Roofing, WTI and Canam

To request a complimentary roof inspection or Canam building envelope analysis, please contact your local Tremco Roofing sales representative, call us at 800.852.6013 or email rebound@tremcoinc.com.

Stage A Winning Comeback with Restoration vs. Replacement

When your facility is a hub of activity, the last thing you want to deal with is roof leaks and condensation issues that damage property and pose a safety risk – not to mention what it can cost to properly address those issues. From community centers and athletic facilities to arenas and hockey rinks, who better than Tremco Roofing and Building Maintenance to keep your facility's roof and building envelope in game shape? No matter the roof or building type, our unique restoration program can help aging facilities bounce back quickly.

Together with our affiliated construction services and building envelope companies WTI (Weatherproofing Technologies, Inc.) and Canam Building Envelope Specialists, Tremco Roofing brings you **REBOUND, the Restoration Program for Athletic Facilities.**

This unique program was designed to help facility managers avoid downtime and lost income by restoring arena and athletic/community center roofs whenever possible, instead of replacing them, which can save you as much as 50 percent.

What's more, we can also help you to save on energy use by identifying and stopping air leaks that compromise building envelope performance and occupant comfort.

Ensure affordable long-term performance of the entire building envelope.

Tremco's **REBOUND** Program starts with a thorough inspection and diagnostics, followed by repair and (if needed) spot replacement, cleaning, and then restoration. Next, our warranties can protect your roof for years to come, as can our maintenance program options. And if your roof is too far gone to restore, we can replace it and still warrant and maintain it for decades of productive use.

Why Restore Instead of Replace?

EXTEND ROOF LIFE AT A FRACTION OF THE COST OF REPLACEMENT

Restoring roofs of all types is our specialty. Tremco Roofing has been "keeping good roofs good" since our founding in 1928 and our experience shows that restoration can dramatically extend the service life of a roof for decades. Choosing to restore your roof with us also means that you will:

- Save up to 50% over the cost of replacing your roof
- Protect your existing roof investment by extending its life cycle
- Keep your facility open because our restoration systems can be applied quickly and with little disruption
- Be relieved of cumbersome project management responsibilities
- Extend roof/building envelope lifecycles with ongoing maintenance
- Potentially be able to repeat the restoration process, forestalling the capital expense and disruption of replacement indefinitely
- Be environmentally responsible by avoiding roof tear-off and disposal costs associated with replacement

The best restoration system for you depends upon the type and condition of your existing roof and your facility management priorities. Your Tremco Roofing field advisor will work closely with you to develop system and budget recommendations to suit your needs.

We employ our state-of-the-art diagnostic testing to determine if your roof is a candidate for restoration and offer a number of fluid applied restoration systems, including:

- **AlphaGuard® MT** — superior durability, very low odor and rapid curing for fast application
- **AlphaGuard BIO** — high bio-based content, high-performance, little or no odor
- **AlphaGuard PUMA** — engineered for durability and abrasion resistance, can be installed in temperatures as low as -20°F/-29°C
- **Geogard** — budget conscious, high quality thin film system that performs for up to 12-plus years

Expertise You Won't Find Anywhere Else

Extensive diagnostics performed by our own experienced roofing technicians include what you would expect from an industry leader – visual inspections by skilled roofing technicians, thermal imaging technology with non-destructive moisture verification and a full complement of laboratory tests to scientifically assess roof conditions.

Specific diagnostic tools include:

- **CORE ANALYSIS**
- **MOISTURE METER TESTING**
- **TENSILE TESTING**
- **INFRARED AND NUCLEAR ANALYSIS**

We've even taken our diagnostics capabilities to the sky with the proprietary drone technology, SkyBEAM™. This groundbreaking whole building infrared scanning and HD photography service makes it possible to scan roofs and the entire building envelope to identify leaks that may be causing both moisture infiltration and energy loss, as well as safety issues and other building problems.
